DRUG SUPPLY CONTAMINATION

Illegal drugs may have been intentionally contaminated with dangerous substances such as fentanyl or xylazine. Being informed about the true contents of illegal drugs can prevent overdoses and death.

The Cumberland County Department of Public Health has xylazine and fentanyl test strips.

Youth Resource Guide

NC 911 GOOD SAMARITAN LAW

North Carolina's 911 Good Samaritan Law states that people who have a drug overdose or people who see someone overdose and get help for them can no longer be prosecuted for possession of small amounts of drugs, paraphernalia or under-age drinking.

SIGNS OF OPIOID OVERDOSE

Opioid overdose is life-threatening! Call 911 right away and follow the dispatcher's instructions if someone has any of these symptoms:

- Face is extremely pale and/or feels clammy to the touch
- Body goes limp
- Fingernails have a purple or blue color
- Vomiting or making gurgling noises
- Cannot be awakened or is not able to speak
- Breathing or heartbeat slows or stops

XYLAZINE

Also known as Tranq, Xylazine is an animal tranquilizer that has been confirmed to be present in the Cumberland County illicit drug supply. This drug raises concerns about the wounds that users can develop from the drug. <https://bit.ly/46Abuk1>

If you see someone overdose, call 911 right away.

For more information about this law, visit North Carolina Harm Reduction Coalition at nchrc.org.

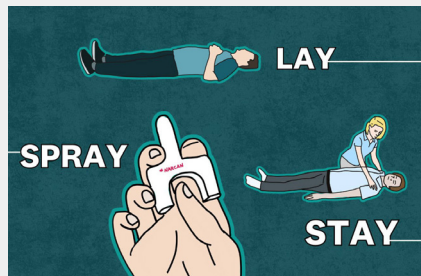

NARCAN® (NALOXONE)

Narcan® (naloxone) is a drug given to quickly reverse an overdose from opioids and restore breathing.

Misuse of opioids like Vicodin® (hydrocodone), OxyContin®, Percocet® (oxycodone) and heroin can lead to overdose. During overdose, breathing slows or stops and can result in death.

People who are at risk of overdose or their family members should have Narcan® in case of accidental overdose.
